

WEBSITE REDESIGN PROPOSAL

*A website as bold as your **mission***

Community
Economic
Defense Project

CEDP turned a Facebook post into Colorado's most comprehensive economic defense organization. Your website should tell that story with the same urgency, clarity, and impact.

PREPARED FOR

Community Economic Defense Project

PREPARED BY

Xponential Technology Services (XTS)

DATE OF SUBMISSION

May 30, 2026

CONTRACT PERIOD

June 30 – November 15, 2026

INVESTMENT

USD 57,000 · 18 weeks · ~3,400 hours

We see what you've built

From a Facebook post in April 2020 to ~200 people across 59 counties. Your current website doesn't tell this story. We'll change that.

68K+

Families served

\$280M

Distributed

8

Bills passed in 2024

74%

BIPOC / Hispanic

Your audience is in crisis.

74% are BIPOC or Hispanic. Over 1,000 people reach you every month — many on mobile, many in Spanish. The redesign must serve them first, then tell your story to funders, policymakers, and partners.

We didn't just propose — we built it

11 fully designed pages delivered before contract — 8 RFP pages + 3 bonus. Every interaction, animation, and layout decision is live and clickable.

REDESIGN Homepage Hero video, bang-bang text, impact stats, press marquee	REDESIGN Get Help Desktop + mobile crisis triage flow	REDESIGN CED Law Eligibility checker, practice areas, attorney profiles	REDESIGN Careers Video hero, snap counter, benefit flip cards, job filter
NEW Our Work 6-step model, audience pathways, program tiles	NEW Legislative Wins Spotlight carousel, bill accordion, year tabs, lightbox	REDESIGN News & Press Featured story, coverage grid, newsletter signup	REDESIGN Team Robin Hood sidebar filter, profile lightbox
BONUS About Origin story, co-founder profiles, values	BONUS Research Publication grid, featured investigation, partner logos	BONUS Mobile Get Help Dedicated app-like crisis triage flow	137.5% of RFP scope delivered before contract

Designed for the phone first — every page

The whole site is built mobile-first

Over 1,000 people reach CEDP every month, the majority on a phone, often mid-crisis and frequently in Spanish. So we didn't design for desktop and shrink down — we designed for the phone first and scaled up. Every page was laid out, tested, and refined at a 380px viewport before it was widened: thumb-zone tap targets, single-column reading order, a persistent call bar, tel: links on every number, and bilingual access one tap away.

Get Help: a triage-first crisis flow

The Get Help page goes furthest. A sticky red call bar keeps (303) 838-1200 and the language toggle on screen at all times. A “Select your situation” panel routes clients — eviction, foreclosure, towing, utilities, debt, or other — straight to Call CARE Center Now or an online intake form, with business-hours and after-hours paths made explicit. A built-in fraud-protection banner warns that CEDP never charges fees and never contacts clients over WhatsApp.

*This isn't responsive design. **It's crisis design.***

A CMS your team controls — no developer required

The site has to keep pace with the work — new programs, wins, press, jobs, and team members — without waiting on an agency or developer. Every page is built on content structures your own staff manage directly.

Structured content types

Custom post types for Programs, Team, News & Press, Job listings, Legislative Wins, and Research. Staff add and update entries through simple forms — never code.

Block-based editing

An on-brand block editor keeps layouts consistent while content stays fully editable. No HTML, no plugins to learn, no way to break the design.

Role-based permissions

Editors, authors, and bilingual reviewers each get the right level of access — so the right people change the right things, safely.

Bilingual in-house

EN/ES content managed side by side via WPML or Polylang. Spanish is maintained by your team in-house, not outsourced every time copy changes.

Media & document library

Images, PDFs, and downloadable resources uploaded, organized, and swapped by staff in seconds — no ticket, no wait.

You own everything

Standard WordPress, open hosting, and a full admin handover. No proprietary lock-in, no recurring dependency on XTS to publish an update.

Self-sufficient from day one: the engagement includes two live CMS training sessions plus written and video documentation — and the prototype you're reviewing already runs on these exact content structures.

[Live Prototype for CEDP](#)

Activities & deliverables

Every deliverable maps to your RFP requirements and evaluation criteria. The engagement runs across four phases.

Phase 1 — Discovery & Design

W1–W4

- Stakeholder interviews with CEDP leadership and CARE Center staff
- User journey mapping for crisis clients, donors, policymakers, job seekers
- Content audit and information architecture
- UX wireframes for all 8 pages + mobile Get Help flow
- UI design in CEDP brand language (navy, red, gold)
- Design review and sign-off with designated CEDP approver
- Bilingual (EN/ES) content structure and translation workflow
- WCAG 2.1 AA accessibility audit of all designs

Development — the build phase

The longest phase: the full WordPress build, all eight pages, integrations, and content migration.

Phase 2 — Development

W3–W14

- WordPress CMS setup with custom theme matching approved designs
- Custom post types: Programs, Team, Job Listings, Press, Research, Legislative Wins
- 8 fully responsive pages: Homepage, Get Help, CED Law, Careers, Our Work, Legislative Wins, News & Press, Team
- Dedicated mobile crisis interface for Get Help (device-detected)
- BambooHR integration for Careers job feed
- Google Analytics 4 implementation with event tracking
- EN/ES language switcher with WPML or Polylang
- Interactive components: eligibility checker, snap counter, video hero, spotlight carousel, profile lightbox
- Content migration from existing cedproject.org
- SEO optimization: meta tags, structured data, sitemap, redirects

Testing, UAT & launch

Verification, accessibility remediation, training, and a controlled go-live.

Phase 3 — Integration Testing

W15–W16

- Cross-browser testing (Chrome, Safari, Firefox, Edge)
- Device testing across phone, tablet, and desktop breakpoints
- Third-party integration verification (BambooHR, GA4, Salesforce/HubSpot)
- WCAG 2.1 AA compliance audit with remediation
- Performance optimization: Core Web Vitals, image compression, lazy loading
- Security hardening: SSL, headers, plugin audit

Phase 4 — UAT & Launch

W17–W18

- Client UAT with CEDP-designated approver
- Bug fix and stabilization sprint
- CMS training for CEDP content team (2 sessions + documentation)
- DNS migration and go-live cutover
- Post-launch monitoring (48-hour watch period)
- 3-month warranty and support included at no additional cost

[Live Prototype for CEDP](#)

Lumen AAE — our delivery accelerator

For 8 pages, bilingual content, CMS integration, and an 18-week window, velocity matters. Lumen AAE is how we deliver without compromising quality.

Co-Work

AI-augmented content generation, design iteration, and specification.

40% faster discovery-to-design

Co-Pilot

AI-assisted development with real-time code review, accessibility checking, and responsive testing.

30% faster build cycles

Co-Code

AI-generated component scaffolding, CSS systems, and WordPress theme architecture.

Production-ready components

Why this matters for CEDP: the prototype you're viewing was built using Lumen AAE — 11 pages, 20+ interactive components, in a fraction of traditional development time. The same methodology powers the production build. What you see is what you get, faster.

18 weeks to launch

June 30 – November 15, 2026. Milestones aligned to your contract window.

[Live Prototype for CEDP](#)

USD 57,000 — all-in

~3,400 person-hours across 18 calendar weeks. Includes 3-month post-launch warranty and go-live support.

Phase	Duration	Activities	Investment
Discovery & Design	W1–W4	Research, IA, wireframes, UI design	\$7,200
Development	W3–W14	WordPress build, 8 pages, integrations, content migration	\$38,000
Integration Testing	W15–W16	Cross-browser, device, accessibility, performance	\$5,900
UAT & Go-Live	W17–W18	Client testing, training, launch, warranty	\$5,900
Total	18 weeks	~3,400 hours · 3-month warranty included	USD 57,000

Where the hours go — and what's included

Hours by role

Included at no extra cost

- ✓ 3-month post-launch warranty
- ✓ Go-live support and monitoring
- ✓ CMS training (2 sessions + docs)
- ✓ WCAG 2.1 AA compliance audit
- ✓ SEO setup and redirect mapping
- ✓ 11-page interactive prototype (delivered)

Who's building this

A dedicated 6-person team with nonprofit, bilingual, and accessibility expertise.

Project Manager

Client liaison, milestone tracking, sprint planning

Solution Architect

WordPress architecture, integrations, security

Business Analyst

Requirements, content mapping, UAT coordination

Frontend Developer

UI build, animations, responsive, accessibility

WordPress Developer

Theme, CPTs, plugins, CMS, bilingual setup

QA Tester

Cross-browser, device, WCAG, performance

Meridian AI — beyond the redesign

XTS's Meridian framework brings AI capabilities to CEDP's platform. These are not in the current scope — they represent the next phase of digital transformation.

INTAKE

AI-Powered Crisis Triage

A conversational chatbot that asks clients about their situation in plain language (EN or ES) and routes them to the right service — eviction, foreclosure, towing, or debt — before they reach the CARE Center. Reduces call volume and wait times.

LEGAL

Smart Document Analyzer

Clients photograph eviction notices, towing receipts, or debt letters. Meridian reads the document, identifies violations of Colorado law (Towing Bill of Rights, For Cause Eviction Act), and generates a preliminary legal assessment for attorneys.

PREVENTION

Predictive Eviction Risk Map

Aggregates public records, court filings, and client data to identify neighborhoods and buildings at highest risk of mass eviction — before crisis hits. Enables proactive outreach and resource deployment.

CONTENT

Bilingual Content Intelligence

Dynamic EN/ES adaptation that goes beyond static translation. Meridian adjusts reading level, cultural references, and legal terminology for Spanish-speaking clients — ensuring comprehension, not just translation.

IMPACT

Real-Time Impact Dashboard

Live visualization connecting CEDP's client data to legislative outcomes. How many families were protected by each bill? Which counties have the highest need? Automates the impact reports funders require.

NAVIGATION

Intelligent Resource Matching

AI-driven matching of clients to the full spectrum of assistance — rental aid, legal representation, foreclosure counseling, community resources — based on situation, location, and eligibility. One intake, all services.

Why XTS

Xponential Technology Services (XTS) is a technology services firm under Kings Global, specializing in digital transformation for mission-driven organizations.

Nonprofit & advocacy experience

XTS actively serves nonprofit, social impact, and advocacy organizations across the US and internationally. Our team understands the unique constraints — limited budgets, volunteer-dependent content workflows, bilingual audiences, and serving both crisis clients and institutional funders from one platform.

Bilingual & multilingual projects

We've delivered bilingual (EN/ES) and multilingual platforms for organizations serving diverse communities. Our approach goes beyond plugin-based translation — we architect content structures supporting true bilingual workflows: separate content review, culturally adapted messaging, and language-specific SEO.

Accessibility & WCAG compliance

Every project includes WCAG 2.1 AA compliance as a baseline, not an add-on. Our QA process includes automated scanning (axe, Lighthouse) and manual testing with screen readers — accessible to clients with visual, motor, and cognitive disabilities.

Speed of delivery — proven

Most agencies submit a proposal with wireframe mockups. We submitted 11 fully interactive pages with working animations, real content, and actual navigation — built using Lumen AAE, the same methodology that powers the production build. This isn't a pitch deck. It's proof of execution.

Sensitive data, handled responsibly

CEDP handles sensitive client data — names, addresses, legal cases, financial records. XTS implements layered safeguards across the platform:

SSL/TLS encryption

All data encrypted in transit

Role-based access controls

Permissions enforced within WordPress

No PII in the frontend

Client PII never stored in the website frontend

Anonymized analytics

GA4 with anonymized IP, no PII in event parameters

Form data to CRM

Submissions routed to Salesforce/HubSpot, not the WP database

Security hardening

Updated plugins, disabled XML-RPC, rate-limited login, security headers

[Live Prototype for CEDP](#)

Where we've done this before

The prototype shows what we'll build. These engagements show the patterns behind it — CMS independence, nonprofit delivery, multi-audience platforms, and integration-heavy builds.

Digital Agency Portfolio Enhancement

WordPress CMS · Custom Theme · System Integration

Multiple WordPress-based CMS builds for a U.S. digital agency — custom themes, custom post types, and editorial workflows that let non-technical staff publish independently, alongside e-commerce and third-party integration.

Maps to CEDP: *Your site runs on WordPress today. This is exactly the model you need — a CMS your own team controls.*

Healthcare E-Commerce — Nonprofit

Nonprofit · WooCommerce · ERP Integration

For a mission-driven nonprofit, an integrated WooCommerce storefront connected to NetSuite — eliminating manual order processing and unifying back-office operations, with ~70% reduction in processing time.

Maps to CEDP: *A nonprofit serving a vulnerable population with complex back-end integrations — the same DNA as serving families in crisis while keeping operations lean.*

Financial Services Web Platform

Multi-Audience · Data Visualization · Web Platform

Rebuilt the digital presence of a private investment firm — a multi-audience platform with stakeholder-facing design, data visualization, and multiple system integrations behind one coherent experience.

Maps to CEDP: *You serve crisis clients, donors, policymakers, and partners from one site. Multi-audience navigation and funder-facing data viz map directly.*

Events Review Product Development

Multi-Audience · Analytics · Product Development

A product platform serving three distinct user groups — participants, organizers, and sponsors — each with tailored pathways, supported by analytics and data visualization.

Maps to CEDP: *Distinct audiences with tailored journeys and reporting — the structural challenge behind your clients, navigators, and funders all using one platform.*

Working together

For a successful 18-week delivery, we ask the following from CEDP:

- 1 CEDP designates a single named approver with authority to sign off on design and content decisions
- 2 CEDP delivers all new page copy per the content matrix within 2 weeks of receiving XTS templates
- 3 CEDP provides final photography and brand assets by W3
- 4 CEDP provides access credentials to all third-party systems (BambooHR, Salesforce/HubSpot, GA4)
- 5 Any delay in client content delivery beyond 2 weeks may result in a corresponding timeline extension
- 6 Scope changes requested after design sign-off are subject to a change order process

How we meet your criteria

Each evaluation criterion from your RFP, mapped to our response.

1

Alignment with CEDP's needs

An 11-page interactive prototype using CEDP's real content, photos, and data. Every decision maps to a need: crisis-first Get Help, impact-forward Legislative Wins, recruitment-optimized Careers, bilingual throughout.

2

Experience with nonprofits & advocacy

Active engagement with nonprofit and advocacy clients. Bilingual projects. WordPress CMS expertise tuned for volunteer-operated teams. Funder-facing vs client-facing design understanding.

3

Usability, accessibility, UX

Dedicated mobile crisis interface (not just responsive). WCAG 2.1 AA baseline. 44px+ touch targets. Tel: links on all numbers. Bilingual toggle. Eligibility checker. App-like triage flow.

4

Methodology & workflow

Lumen AAE (Co-Work / Co-Pilot / Co-Code) — 30–50% velocity improvement without quality compromise. 4-phase structure, weekly check-ins, single-approver model, change-order process.

5

Similar projects & outcomes

The prototype itself is the strongest evidence — 11 pages built before contract, using the same tools and methodology that power the production build. We don't describe; we show.

6

Data confidentiality

SSL encryption, role-based CMS access, no PII in analytics, form data routed to CRM (not stored in WordPress), security hardening, and plugin audit.

7

Cost reasonableness

USD 57,000 covers all 8 pages, bilingual structure, a CMS your team controls, integrations, and a 3-month warranty — the full RFP scope at a competitive fixed price.

Community
Economic
Defense Project

LET'S BUILD THIS

*Let's build this **together***

The prototype is live. The team is ready. The methodology is proven. All that's left is your go.
